Cave Creek Drainage Master Plan

The Cave Creek Complex Fire was started by lightning on June 21, 2005. Historically, it is Arizona's second-worst fire, burning more than 248,000 acres.

Cave Creek Complex Fire
Burn Area

Wildfires may consume the forest floor, leaving the soil surface in a water-repellant condition that increases stormwater runoff. With revegetation, these conditions can be lessened over time following a fire.
